Your hearing • Our passion

# A new perspective in hearing

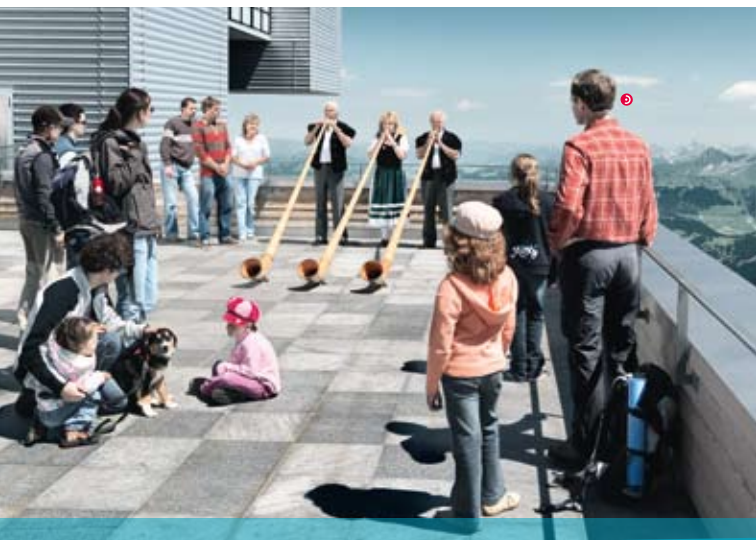

Sometimes a new idea or experience causes us to completely change our point of view. Old ideas can be refreshed by a new perspective, expanding our capacity to live life to the fullest. Bernafon is proud to offer a new perspective with Veras, our next generation of ChannelFree™ hearing systems.

# Balanced hearing

ChannelFree™ digital signal processing is the core technology in the Veras system. Incoming sounds are analyzed and adjusted 20,000 times per second to amplify even the smallest speech sounds. The result is clear natural sound and maximum speech understanding.

An advanced automatic system allows Veras to adapt seamlessly to every change in the sound scene. Instant communication between the instruments on each ear results in a more natural listening experience.

# Complete versatility

Veras offers a choice of six instrument styles with a range of sizes and shapes to suit every preference. Attractive color and fitting options make Veras extremely versatile.

Your hearing care professional can advise you about the best combination of features, styles and fitting options to meet your personal hearing needs.

With so many choices, Veras is the hearing system with something for everyone!

## Practical accessories

A number of useful accessories are available to enhance your Veras listening experience.

An optional remote control allows discreet operation of the hearing system. The SoundGate wireless communication device links Veras to sound sources such as music players, cell phones and computers via the Bluetooth® interface.

A special TV adapter is also available to enhance your perception of TV audio. A telephone adapter can improve your ability to hear land-line calls. Both accessories communicate with the hearing system through the SoundGate.

SoundGate

Hearing and understanding are basic human needs. Hearing problems and the resulting social consequences represent a challenge for society. We believe in a world in which people with restricted hearing can communicate again without limitation thanks to advanced technology.
